Dear Hiring Team,

I am applying for the Lead Software Engineer position. Based on the job description, I think this position looks both fun and challenging, as well as being a great place for me to further my career. The following are a few reasons why I will be a great match for this position:

- I am extremely comfortable with React, React Native and Redux and have even implemented my own “micro-libraries” of React and Redux from scratch.
- I have extensive experience with typed languages like C/C++ and Java.
- I enjoy challenging myself to utilize proper data structures for each task.
- I pride myself on producing highly-modular, elegant, algorithmic applications and services, following OOP best practices.
- I have extensive experience deploying a variety of full tech stacks on “bare metal” Linux machines, complete with load balancers, failovers, etc.
- I have a deep knowledge of computer networking, including DNS, SSH configurations, IP Tables, UFW, as well as writing servers, load balancers, etc. in NodeJs, Python, Java and C/C++.

I encourage you to view my GitHub repositories, as well as to check my web app's rankings on Qualys SSL Labs, ImmuniWeb SSLScan and Google PageSpeed Insights to gauge my competencies in those areas:

- <https://www.ssllabs.com/ssltest/analyze.html?d=chivingtoninc.com>
- <https://www.htbridge.com/ssl/?id=uAXLxfew>
- <https://developers.google.com/speed/pagespeed/insights/?url=chivingtoninc.com>

My resume with detailed work experience and relevant skill set is enclosed. I would love to ask you more questions about the tools you’re using and the types of projects I might be running if hired.

If you have any questions about my resume, feel free to reach out at the phone or email listed above. Thank you for your time and consideration. I look forward to speaking with you soon!

Sincerely,

Johnathan T. Chivington
