Dear Hiring Team,

I am an adept software engineer, experienced with object-oriented, algorithmic design in C, Python, Java & Javascript, as well as learning algorithms & models, and I am seeking entry-level Deep Learning roles in Computer Vision & Natural Language Processing.

I am a Computer Science student at Bellevue College and have completed additional courses in Machine & Deep Learning from Stanford & deeplearning.ai through Coursera. Currently, I am focused on creating CV, NLP, and SLAM applications for embedded & cloud-based systems. I am building a modular ecosystem of AI tools from embedded & IoT devices to cloud-based fleet management systems.

Deep Learning is revolutionizing many industries and I am learning to leverage it's incredible capabilities for enhancing daily life. My primary career interests are in automated robotics for manufacturing, food production and sustainable technologies.

Lastly, I am a conversational Spanish speaker, a beginner in several other languages, and I enjoy connecting with people from different cultures and backgrounds. It would be a rewarding experience to work alongside dedicated professionals who are also passionate about bringing useful AI technologies to life.

Thank you for your time and consideration. I look forward to speaking with you soon.

Sincerely,

Johnathan T. Chivington
